Project

Reason of Choosing the Project

The website provides a complete environment for practicing automation testing.

It includes e-commerce features such as user registration, product search, and order completion, making it ideal for testing real-world scenarios.

It allows you to enhance your automation testing skills using tools like Selenium and Jira.

It simulates a real working environment where functional, performance, and UI testing can be executed.

Project Objective

Analyze the website and identify possible test scenarios.

Develop a set of automated tests using Selenium or another suitable tool.

Execute the tests and detect any bugs or issues in the website.

Improve automation strategies for better efficiency.
Document the results and provide a comprehensive report on website quality and test performance.

Automation Exercise
